Congratulations on your purchase of a Rugged Ridge™ suspension kit. To fully enjoy and understand this product we ask that you take a few moments to read through these instructions. Before beginning the installation, read these instructions and the enclosed driver’s “WARNING NOTICE” thoroughly and completely. Also affix the “WARNING” decal in passenger compartment in clear view of all occupants. If any of these items are missing from this instruction packet, do not proceed with installation, but call Omix-Ada to obtain needed items. If you have any questions or reservations about installing this lift kit, call Omix-Ada at 770-614-6101 for Technical Assistance or Customer Service departments.

A FEW WORDS ABOUT SAFETY:
Your safety and the safety of other motorists is very important. As the owner of a modified suspension vehicle you are the person choosing the combination of suspension, wheels, tires and drive train that best fit your intended use. Likewise, you are the person responsible for the safety and legality of the vehicle you modify. In modifying your vehicle’s suspension, balance your off-road capabilities against how the vehicle may actually be used off-road and on-road.

It is not practical or possible to warn about all hazards associated with modifying your suspension for improved off road capabilities. To help you make informed decisions about safety, we have provided certain information in the form of “Notices”, “Cautions”, and “Warnings”. This information alerts you to potential hazards that could hurt you or others.

Notice: This is a caution against anything which may cause damage to the vehicle or its equipment if the caution is ignored. The Notice includes information about how you can avoid or reduce those risks.

Caution: This is a signal telling you that you or others CAN BE HURT if you dont follow the instructions. The Caution includes information about how you can avoid those risks.

Warning: This is a signal telling you that you CAN BE KILLED or SERIOUSLY HURT if you don’t follow the Warning. The Warning includes information about what you must or must not do in order to reduce the risk of injury to yourself and others.

The following Warning label is included with your Rugged Ridge™ suspension kit and should be placed on the vehicle visor or other conspicuous location after installation:

PRE-INSTALLATION NOTES:

Notice: This kit should only be installed by a professional mechanic or individual with significant automotive experience.

- Refer to parts list and inventory your kit to insure all parts and hardware pieces are available before beginning installation. Contact your independent dealer immediately if parts are missing.

- Installed lift will vary depending on vehicle options and configuration. As a reference and important guide should technical assistance be required, establish base ride-height measurements before beginning installation. Park vehicle on hard, level surface. Carefully measure the four corners of the vehicle (front and rear –both sides) from the ground up to the center of the fender opening above the axle. Record below and save.

COMPONENT LISTING

- Front lift springs (2)
- Rear lift springs (2)
- Shocks (18415.50 only)
- Bump stop extension, Rear (2)
- Bump stop extension, Front (2)
- Sway bar end links, rear (2)
- Brake line relocation bracket, rear (2)
- Parking brake relocation bracket (1)
- Track bar relocation bracket, rear (1)

Installation:

**WARNING**: An alignment must be performed after installing this kit. Failure to do so will cause dangerous driving conditions and premature tire wear.

**CAUTION**: It is suggested that a thread penetrating spray is used on all bolts and nuts to aid in removal. Always use protective eye wear and gloves when working on suspension components.

1. Park vehicle on flat, level ground and set emergency brake.
2. Raise the front of the vehicle and support the frame rails using jack stands. Using a floor jack, support the center of the front axle, remove both wheels.

   NOTICE: It is recommended to disconnect the front drive shaft to avoid damage. Make sure to mark both sides of the connection so you can properly align when you reconnect it. Tie loose end of the drive shaft up so it will not hang down. Failure to do so may result in damage to your drive shaft.

3. Disconnect the front sway bar end links using a 18mm socket. (see 1A) Disconnect the front track bar from the axle using a 21mm socket. (see 2A)
4. If installing Rugged Ridge Steering Stabilizer, remove factory steering stabilizer using 18mm socket. (see 3A)
5. Disconnect front shocks using an 18mm socket. (see 4A) Unbolt the front rubber brake hose retainers from the frame.

   NOTE: On newer model vehicles the brake line bracket by the lower control arm will need to be loosened also.

6. Remove both front coil springs.

   NOTICE: Inspect coil springs, coil spring isolators, and mounting areas for any cracks, broken or worn parts. Replace or repair any affected areas before you continue.

   NOTE: Use of A thread locking liquid is recommended during reassemble of vehicle.

7. To locate new front bump stop, place bump stop on the center of bump stop pad located on front axle. Mark and drill using a 25/64" drill bit. Do not install at this time.
8. Place bump stop in coil spring and install lift coil spring. Attach bump stop to axle using the 3/8 x 2 3/4" button head bolts with one washer under the 3/8" nut.
9. Let the weight of the frame down on to the new coils. Re-Attach front drive shaft, end links, track bar, etc.

   NOTE: The rear sway bar links will be used in the front suspension.

10. Install shocks, steering stabilizer. Install tires/wheels.
11. Torque all nuts and bolts to factory specifications. Re-check after 100 miles.
Installation: Rear Suspension

1. Raise the rear of the vehicle and properly support frame rails using jack stands. Using a floor jack, support the rear axle to relieve tension on the shocks and remove wheels. Disconnect both rear shocks using 16mm socket. (See #1B)
2. Disconnect rear track bar from the axle using 21mm socket. (See #2B). Remove both rear sway bar end links using 18mm socket. (See #3B).
3. Disconnect ABS sensor wire fasteners from frame and upper control arm bracket on both sides (See #4B) and disconnect the brake line bracket from frame. Unbolt the emergency brake line retainer from the bottom of the tub above the axle. Lower the axle down and remove factory rear coils. (See #5B)

4. Place rear Track Bar relocation bracket over factory bracket on the axle. With bracket seated flush, mark and drill the new center mounting holes using a 15/32" drill bit. (See 1C)
5. Install the supplied 7/16 x 1" fine thread bolt and fine thread nyloc nut. Use one 7/16" washer under the nut. Tighten nut at this time.

ILLUSTRATION C
6. It will be necessary to drill through the driver side bottom of the OEM bracket and through the track bar relocation bracket. Drill using a 17/32" drill bit. (See 2C) Once drilled, install the supplied 1/2" x 1 1/4" fine thread bolt and nyloc nut. Use one washer under the bolt. Install factory bolt and nut at the bottom location being sure to use the supplied crush sleeve. (See 3C) Tighten all track bar bracket hardware at this time.

7. Install new rear coils. Be sure to re-use the upper OE Rubber isolator pad.

8. Install the coil spring retainers. (See 4C)

9. Install the brake line extension brackets.

10. Install the emergency brake cable relocation bracket.

11. Attach new rear bump stops to the factory location on the axle using the 5/16 x 1" fine thread bolts, washers and nuts supplied. Be sure to install the bump stop so that the angled end is towards the rear.

12. Let weight on coil springs and re-attach sway bar end links, ABS lines.

13. Install new track bar bracket brace at axle with supplied diff cover bolts. Attach factory track bar to the new bracket in the lower mounting hole in the new bracket using 9/16 x 3" fine thread bolt, washer and nut. One washer will be used under the head of the bolt. Be sure to install the bolt from the front side of the vehicle toward rear of the vehicle.

NOTE: It is recommended to put a re-enforcement weld on the factory track bar bracket at this time.

15. Install tires/wheels and lower vehicle to the ground.

Post Installation Checks/Alignment:
- After installation is complete, double check that all nuts and bolts are tight. (Do not re-tighten nuts and bolts where Loctite was used). Check to ensure there is adequate clearance between all rotating, mobile and fixed members.
- A transfer case lowering kit is available if a drive shaft vibration is present.
- Rotate driveshafts and check for interference at differential yoke and cardan joint. If necessary, lightly dress casting(s) and/or U-joint tabs in order to eliminate binding.
- Check clearance between inner side wall of tires and links. It may be necessary to adjust steering stops.

NOTICE: Adjust drag link so that steering wheel remains centered and wheel sweep from side to side remains equal. Failure to do so may cause computer errors, odd handling characteristics and poor performance. Have a qualified alignment center check and realign to factory specifications.

NOTICE: With vehicle securely elevated, carefully inspect and adjust to assure adequate clearance between tires (inner side wall), body and suspension components throughout range of steering and suspension travel. Additionally, carefully inspect and adjust to maintain clearance between suspension components, wiring harnesses, exhaust, brake and fuel lines, fuel tank, floorboards and body panels. Complete by properly
UPDATE NOTICE: For JK wrangler with center fixed mount bracket brake lines

Step 1. Remove the factory bolt holding the brake line bracket to the spring mount. (See fig. 1A)
Step 2. Remove the brake line brake bracket from the coil spring mount. (See fig. 1B)
Step 3. Remove the lower shock mount bolt. (See fig. 1C)
Step 4. Compress the lower shock and move the brake line to the outside of the shock.
Step 5. Reattach shock and tighten.

Step 5. Using the supplied brake line relocation bracket, mount to the existing hole in the coil spring mount. Mount bracket on the outside of the coil spring mount at a 45 deg. angle upward. (See fig. 2A)
Step 6. Attach the factory brake line to the relocation bracket using the factory bolt. (See fig. 2B)
Step 7. Bend bracket slightly outward away from shock.
